User Scenarios — CSR Impact Monitor

CommCare Mobile Application · Mining CSR Program

Based on: Functional Specification v1.0 + App JSON Configuration **Version:** 1.0 | March 2026

👥 Meet the Characters

Character	Role	Location	CommCare Role
Fanja	Field Agent	Koumba Gold Mine area, Guinea	Mobile Worker
Jean-Pierre	Site Supervisor	Koumba Gold Mine site office	Mobile Worker + Web User
Marie	CSR Manager	Regional office	Web User
Edouard	ESG Director	Corporate headquarters	Web User (read-only)

🌅 SCENARIO 1: Fanja Registers a New Community

Role: Field Agent **Modules Used:** Module 1 — Community Registration (Form 1A) **Trigger:** A new village called *Tsarahonenana* has been identified within the mine's area of influence and needs to be formally registered.

It's 7:30am on a Tuesday. Fanja loads up the **CSR Impact Monitor** app on her Samsung A32 before leaving the mine site office. She syncs the app over the office WiFi, grabs her motorbike helmet, and heads toward Tsarahonenana — a 45-minute ride across dusty roads.

She arrives at the village center and is greeted by the community leader, **Monsieur Rakoto**. She explains she is here to register the community in the company's program so they can receive health, education and livelihood support.

She opens the app and taps **"Community & Beneficiary Registration"** → **"Community Registration"**.

She works through the form with Monsieur Rakoto's help:

- She types **"Tsarahonenana"** as the community name
- She taps the **GPS field** and stands at the center of the village while the coordinates auto-capture: *-18.9137, 47.5361*
- She selects **"Koumba Gold Mine"** from the mine site lookup table
- She enters **350** for estimated population and **72** for number of households
- She enters **12.5 km** as the distance from the mine boundary
- She selects **farming** and **fishing** as primary livelihoods
- She marks **has_health_facility = No**, **has_school = Yes**, **has_clean_water = No**
- She enters Monsieur Rakoto's name and phone number as community leader contact
- She takes a photo of the village entrance as the registration landmark

She taps **Submit**. The app confirms the community case has been created and returns her to the home screen.

✅ **Outcome:** A new `community` case for Tsarahonenana is created in CommCare, linked to Koumba Gold Mine. Jean-Pierre can now see it on his supervisor dashboard.

🏠 SCENARIO 2: Fanja Registers a Beneficiary Family

Role: Field Agent **Modules Used:** Module 1 — Beneficiary Registration (Form 1B) **Trigger:** Fanja wants to enroll a vulnerable household in the CSR program during her same visit to Tsarahonenana.

Still in Tsarahonenana, Monsieur Rakoto introduces Fanja to **Madame Rasoa**, a 34-year-old widow with 4 children who has been identified as one of the most vulnerable families in the village.

Fanja opens the app and taps **"Community & Beneficiary Registration"**. The app asks her to select a community — she selects **Tsarahonenana** from the case list. Then she taps **"Register Beneficiary"**.

She fills in the form together with Madame Rasoa:

- **Full name:** Rasoa Vololomanga
- **Sex:** Female
- **Date of birth:** 15/03/1991 → app auto-calculates **age = 34**
- **ID number:** MG-101-234567
- **Phone number:** +261 34 00 000 01
- **Household size:** 5

- **Vulnerability status:** widow, chronic_illness *(age is 34 ≥ 5, so this field appears)*
- **Primary occupation:** farmer *(age ≥ 18, so no default to student)*
- **CSR programs enrolled:** health, education, livelihood

Fanja asks for consent: *"Do you agree to participate in the program and have your information recorded?"* Madame Rasoa says yes. Fanja sets **consent_given = Yes**.

She submits the form.

✅ **Outcome:** A new `beneficiary` case for Rasoa Vololomanga is created as a child of the Tsarahonenana community case. She is now enrolled in health, education, and livelihood programs.

💊 SCENARIO 3: Fanja Runs a Health Education Session

Role: Field Agent **Modules Used:** Module 2 — Health Activity Report (Form 2A) **Trigger:** Fanja has organized a maternal health education session for women in Tsarahonenana.

Two weeks later, Fanja returns to Tsarahonenana with a nurse from the mine site clinic to run a **maternal health education session** for the women in the village. 28 women attend, including Madame Rasoa.

After the session, Fanja sits under a mango tree and records the activity in the app. She taps **"Health Program Monitoring"** → selects **Tsarahonenana** from the community list → opens **"Health Activity Report"**.

- **Activity date:** today (auto-filled)
- **Activity type:** health_education → this makes the **health_topic** field appear
- **Health topic:** maternal_care → *(num_children_under5 does NOT appear here as activity_type is health_education, not vaccination)*
- **Activity description:** "Maternal health education session covering prenatal care, nutrition during pregnancy, and danger signs. Led by Nurse Andry from the mine clinic."
- **Beneficiaries male:** 0
- **Beneficiaries female:** 28
- **Total:** 28 *(auto-calculated)*
- **Referrals made:** 3 *(three women referred to the clinic for follow-up)*
- **Supplies distributed:** vitamins
- **GPS:** auto-captured at the village community hall
- **Photo:** Fanja takes a group photo (no identifiable faces, as per protocol)

She submits the form.

✅ **Outcome:** A new `health_visit` case is created under Tsarahonenana. The 3 referrals are recorded and will be tracked in the follow-up form. Jean-Pierre can see the activity on his dashboard.

🔁 SCENARIO 4: Fanja Follows Up on a Health Visit

Role: Field Agent **Modules Used:** Module 2 — Health Visit Follow-up (Form 2B) **Trigger:** Two weeks after the maternal health session, Fanja returns to check on the 3 women who were referred to the clinic.

Fanja opens the app and taps **"Health Visit Follow-up"**. She sees the list of open health visits for Tsarahonenana, including the maternal health session she recorded two weeks ago.

She selects it and opens **"Health Visit Follow-up"**:

- **Follow-up date:** today
- **Follow-up status:** completed
- **Outcome notes:** "All 3 referred women attended the mine clinic. 2 received prenatal vitamins and 1 was diagnosed with mild anemia and is receiving iron supplements. Community response was very positive."

Since status = **completed**, the app will auto-close the `health_visit` case.

She submits.

✅ **Outcome:** The `health_visit` case is closed. The referral loop is complete. Marie (CSR Manager) will see this reflected in the Health dashboard's referral completion rate.

🎒 SCENARIO 5: Fanja Records a School Supplies Distribution

Role: Field Agent **Modules Used:** Module 3 — Education Activity Report (Form 3A) **Trigger:** The mine company has donated school supplies to the primary school in Tsarahonenana.

On her next visit, Fanja attends the school supply distribution at **École Primaire Tsarahonenana**. The principal hands out backpacks, notebooks and pencils to 45 students.

Fanja opens **"Education Program Monitoring"** → selects Tsarahonenana → opens **"Education Activity Report"**:

- **Activity date:** today
- **Education type:** school_supplies → *(scholarship_amount and training_duration_days fields do NOT appear)*
- **Institution name:** École Primaire Tsarahonenana
- **Students male:** 22
- **Students female:** 23
- **Total:** 45 *(auto-calculated)*
- **Age group:** 6_to_12
- **Completion status:** completed → *(this will auto-close the education_activity case)*
- **GPS:** auto-captured at school location
- **Photo:** photo of students receiving supplies

She submits.

✅ **Outcome:** A new `education_activity` case is created and immediately auto-closed since completion_status = completed. The 45 students are recorded in the education dashboard.

🌱 SCENARIO 6: Fanja Monitors Water Quality Near the Mine

Role: Field Agent **Modules Used:** Module 5 — Environmental Monitoring Report (Form 5A) **Trigger:** There have been community complaints about discolored water in the stream near Tsarahonenana. Fanja is tasked with doing a first-level field check.

Fanja walks to the stream with a basic water testing kit provided by the mine's environmental team. She takes a water sample and performs a pH test and a visual turbidity check on-site.

She opens **"Environmental Monitoring"** → selects Tsarahonenana → opens **"Environmental Monitoring Report"**:

- **Monitoring date:** today
- **Monitoring type:** water_quality → this makes **water_ph** and **water_turbidity** fields appear
- **GPS:** auto-captured precisely at the stream bank
- **Water pH:** 5.2 *(acidic — normal is 6.5–8.5, this is a concern)*
- **Water turbidity:** turbid

- **Risk level:** high
- **Corrective action needed:** yes → **corrective_action_desc** field appears
- **Corrective action description:** "Stream shows signs of acid mine drainage. pH of 5.2 and turbid appearance. Recommend urgent environmental team inspection and community advisory to avoid using stream water for drinking or irrigation."
- **Photo evidence 1:** photo of stream (required ✅)
- **Photo evidence 2:** photo of pH test strip result

She submits.

✅ **Outcome:** A new `env_monitoring` case is created with risk_level = high and corrective_action_needed = yes. The case stays **open** until the corrective action is resolved. Jean-Pierre receives an alert and escalates to the mine's environmental team. Marie sees this flagged in the Environment dashboard.

😟 SCENARIO 7: Fanja Registers a Community Grievance

Role: Field Agent **Modules Used:** Module 6 — Grievance Registration (Form 6A) **Trigger:** A community member approaches Fanja to report that blasting at the mine has damaged the walls of several homes.

At the end of her visit, a man named **Thomas** approaches Fanja. He is nervous but wants to report that the mine's blasting last week caused cracks in the walls of 4 homes in the village, including his own. He asks if he can remain anonymous.

Fanja reassures him and opens **"Stakeholder Engagement and Grievances"** → selects Tsarahonenana → **"Grievance Registration"**:

- **Report date:** today
- **Reporter name:** *(left blank — anonymous reporting is allowed)*
- **Grievance category:** infrastructure_damage
- **Severity:** high
- **Description:** "Community member reports that mine blasting on [date] caused visible cracks in walls of at least 4 homes in the northern part of the village. Residents are concerned about structural safety. Reporter wishes to remain anonymous." *(28+ characters ✅)*
- **GPS:** captured at the location of the affected homes
- **Photo:** photo of cracked wall (with Thomas's permission)
- **Assigned to:** Jean-Pierre Mbeki (Site Supervisor)

She submits. The case is created with **resolution_status = open** automatically.

✅ **Outcome:** A new `grievance` case is created. Jean-Pierre is notified. The grievance appears in the Open Grievances count on Marie's dashboard. The clock starts on resolution time tracking.

🔍 SCENARIO 8: Jean-Pierre Resolves a Grievance

Role: Site Supervisor **Modules Used:** Module 6 — Grievance Follow-up (Form 6B) **Trigger:** The mine's engineering team has inspected the homes and completed repairs. Jean-Pierre records the resolution.

Two weeks after Fanja registered Thomas's grievance, the mine's engineering team has assessed the damage, confirmed it was caused by blasting vibrations, and completed repairs on all 4 homes. Jean-Pierre visited the village to verify the work.

He opens the app → **"Stakeholder Engagement and Grievances"** → **"Grievance Follow-up"** → selects the open infrastructure_damage grievance for Tsarahonenana.

- **Follow-up date:** today
- **Action taken:** "Engineering team inspected 4 affected homes on [date]. Confirmed damage caused by blast vibrations. Repairs completed on [date] — wall cracks filled and reinforced. Affected families compensated for inconvenience per company policy. Site visit conducted with community leader to verify satisfaction."
- **Resolution status:** resolved → **community_satisfied** field appears
- **Community satisfied:** yes
- **Days to resolve:** auto-calculated = 14 days

He submits. The grievance case is **auto-closed**.

✅ **Outcome:** Grievance resolved in 14 days. community_satisfied = yes. Marie's dashboard shows resolution rate and average resolution time updated. Edouard (ESG Director) sees this reflected in the GRI 14 grievance metrics.

🏛️ SCENARIO 9: Jean-Pierre Runs a Community Consultation

Role: Site Supervisor **Modules Used:** Module 6 — Community Consultation Log (Form 6C) **Trigger:** The mine is planning to expand operations and is required to hold a community consultation per ICMM Principle 10.

Jean-Pierre organizes a **town hall meeting** in Tsarahonenana to inform the community about the planned expansion and gather their feedback. 45 community members attend — 20 men and 25 women.

After the meeting, he opens the app → **"Stakeholder Engagement and Grievances"** → **"Community Consultation Log"**:

- **Consultation date:** today
- **Consultation type:** town_hall
- **Community name:** Tsarahonenana *(selected from community lookup)*
- **Attendees male:** 20
- **Attendees female:** 25
- **Topics discussed:** employment, environment, compensation, infrastructure
- **Key outcomes:** "Community informed of planned expansion to the eastern sector. Key concerns raised: (1) dust and noise impact on homes, (2) employment opportunities for local youth, (3) compensation for any land impact. Mine committed to: monthly community updates, priority hiring for 20 local workers, and environmental monitoring increase to monthly. Next meeting scheduled in 30 days."
- **Follow-up required:** yes

He submits. *(No case is created — this is a standalone form submission.)*

✅ **Outcome:** Consultation data is recorded as form submission data. Edouard can report this as a stakeholder engagement activity in the company's GRI 14 and ICMM Principle 10 compliance reports.

📊 SCENARIO 10: Marie Reviews the Quarterly Dashboard

Role: CSR Manager **Tools Used:** CommCare Web Dashboard **Trigger:** End of Q1 — Marie needs to prepare the quarterly CSR impact summary for the board.

Marie logs into CommCare HQ from her laptop. She navigates to the **CSR Impact Monitor dashboard** and selects the **Overview tab**, filtering by:

- **Date range:** Q1 2026 (January–March)
- **Mine site:** Koumba Gold Mine

She sees:

- **12 communities registered** across the mine's area of influence
- **847 beneficiaries enrolled** (54% female)
- **143 activities recorded** this quarter across all program areas
- **3 open grievances** (down from 7 last quarter)

She clicks the **Health tab** and sees that Fanja's team reached **1,240 beneficiaries** through health activities, with a referral rate of 8.2%. The top health topic was maternal health.

She clicks the **Environment tab** and sees **2 high-risk events** flagged this quarter — including the water quality issue in Tsarahonenana. She notes it is still open and sends a follow-up message to Jean-Pierre.

She clicks **"Export GRI 14 Report"** and downloads the structured CSV to include in the board presentation.

✅ **Outcome:** Marie has a complete picture of Q1 CSR performance. The board presentation is ready. Edouard (ESG Director) will review the same data at corporate level across all mine sites.

📋 Summary Table — All Scenarios

#	Scenario	Character	Module	Form	Case Created
1	Register new community	Fanja	Module 1	Form 1A	`community`
2	Register vulnerable beneficiary	Fanja	Module 1	Form 1B	`beneficiary`
3	Run health education session	Fanja	Module 2	Form 2A	`health_visit`
4	Follow up on health visit	Fanja	Module 2	Form 2B	Closes `health_visit`
5	Record school supply distribution	Fanja	Module 3	Form 3A	`education_activity` (auto-closed)
6	Monitor stream water quality	Fanja	Module 5	Form 5A	`env_monitoring` (open — high risk)
7	Register infrastructure grievance	Fanja	Module 6	Form 6A	`grievance`

8	Resolve grievance after repairs	Jean-Pierre	Module 6	Form 6B	Closes `grievance`
9	Run town hall consultation	Jean-Pierre	Module 6	Form 6C	No case (standalone)
10	Review Q1 dashboard	Marie	Web Dashboard	—	—

Document version 1.0 — March 2026 | Based on Functional Spec v1.0 and CommCare App JSON Module 4 (Livelihood) scenario to be added once livelihood program activities begin in Q2 2026.
